# Workshop on Systems Biology for Innovative Bioeconomy 14 – 16 February 2018 Auditorium, Sirindhorn Science Home, Pathum Thani

Organized by:

National Center for Genetic Engineering and Biotechnology

National Science and Technology Development Agency

Ministry of Science and Technology

In collaboration with:

Wageningen University & Research, the Netherlands

SAFE-Aqua project

### Rationale and background:

Systems biology is an interdisciplinary field striving to reveal complex biological processes in an integrated and holistic approach. This newly emerged subject in modern biology has markedly gained increasing interest as a promising strategy to give in-depth insights on molecular mechanisms responsible for driving complex biological processes of lives. With such insights, engineering novel biological systems with desirable functions becomes possible. However, strong background in biology, computational modelling and mathematics are required to understand a complicated dataset extracted from dynamic processes in biology. Various multi-omics tools can be applied to study interactions between components of biological systems in different levels from genomics, proteomics, metabolomics and phenomics to give answer on how these interactions can give rise to functions of specific bio-systems from molecules, cells, organisms, or entire species through a sophisticated modelling strategy. Systems biology is undoubtedly now considered as central to all areas of biology and medicine, highlighting its importance in today's research in life sciences.

#### Objectives:

- To update knowledge and information on systems biology from world-class experts and leading researchers from local institutes, focusing from its basic concept, multi-omics tools, and applications of systems biology on different biological questions for bioeconomy
- 2. To share experience on bioinformatics and computational analysis of bio-dataset in systems biology in the hand-on workshop by experts from WUR
- 3. To strengthen and expand research network in systems biology among researchers in academic and industrial sectors for further and future collaboration
